

Flutter Environmental Responsibility Statement

Last updated: October 2025

Introduction

At Flutter Entertainment, we recognize the importance of protecting the environment and contributing to a sustainable future for our customers, colleagues and the communities where we operate.

This Environmental Responsibility Statement reflects our ongoing commitment to net zero, which includes minimising our environmental footprint while meeting applicable regulatory requirements.

Principles and Focus Areas

Flutter has an overall target to reach net-zero by 2035. Our Go Zero strategy – our Group-wide net-zero plan for addressing climate change and environmental impact – is built around three strategic principles:

1. **Reduce Emissions**

We are committed to taking all reasonable efforts to achieve measurable reductions in greenhouse gas emissions across our value chain (Scope 1, 2, and 3). This principle drives us to improve energy and resource efficiency in our operations, work with suppliers that align with our net-zero goals, source 100% renewable electricity, and adopt lower-carbon materials and services.

2. Remove Unavoidable Emissions

We are focused on exploring solutions to address our unavoidable emissions. This principle drives us to build our strategy neutralizing residual emissions on and after Net Zero date through procurement of carbon dioxide removal solutions.

3. Support Broader Climate Transition

We are dedicated to advancing a net zero, nature-positive future beyond our own operations. This principle drives us to support additional climate solutions across the globe, outside of our reduce and remove principles helping to fast track our global climate transition while building social and environmental benefits.

These principles guide our environmental focus across all divisions and geographies, helping us concentrate on where we can have the greatest impact.

Governance

The Positive Impact plan provides a framework for Flutter's sustainability strategy. Go Zero, our plan for addressing climate change and environmental impact, is a core component of the Positive Impact Plan.

Flutter's Board of Directors, acting through the Board Risk and Sustainability Committee, have ultimate oversight of the Positive Impact Plan and Go Zero. Day-to-day delivery is coordinated by our Group Sustainability & Regulatory Affairs team, working with brands and functions to integrate environmental considerations into operations, procurement, product development, and corporate decision-making.

Our governance structure for climate-related matters, including the Positive Impact Plan and Go Zero, is described in more detail in Flutter's FY 2024 [Task Force on Climate-Related Financial Disclosures \(TCFD\) statement](#).

Monitoring and Reporting

We report on our environmental performance annually through our sustainability reporting and provide updates on our progress toward these commitments. You can find our FY 2024 sustainability report [here](#).

Flutter's environmental responsibility statement will be reviewed annually and will be updated to reflect any updates and changes in our overall framework and strategy.
